AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings of claims in the application:

1-4. (Canceled)

5. (Currently Amended) A multilayer sheet, which comprises:

a substrate layer of an elastomeric styrene polymer comprising from 1 to 20 parts by mass of a dispersed phase of an elastomer comprising from 30 to 50 mass% of styrene monomer units and from 70 to 50 mass% of butadiene monomer units, and from 99 to 80 parts by mass of a continuous phase of a polymer comprising from 35 to 75 mass% of styrene monomer units and from 65 to 25 mass% of (meth)acrylate monomer units, and

a surface layer consisting ~~essentially~~ of a styrene polymer comprising from 35 to 75 mass% of styrene monomer units and from 65 to 25 mass% of (meth)acrylate units, formed on each side of the substrate layer; and

wherein the total thickness of said multilayer sheet is from 50 to 2,000 μm, and the thickness of the surface layer is from 3 to 20% of the total thickness.

6. (Cancelled)

7. (Canceled)

8. (Previously Presented) The sheet according to Claim 5, wherein the refractive index of the surface layer at 25°C is within a range of ±0.01 of the refractive index of the substrate layer.

9. (Previously Presented) A formed product, which comprises:

the sheet as defined in Claim 5.

10. (Previously Presented) An electronic component packaging container, which comprises:

the sheet as defined in Claim 5.

11. (Previously Presented) A food product packaging container, which comprises:

the sheet as defined in Claim 5.

12. (Previously Presented) An embossed carrier tape, which comprises:

the sheet as defined in Claim 5.

13. (Previously Presented) A soft tray which comprises the sheet as defined in Claim 5.

14. (Previously Presented) An electronic component package which comprises the sheet as defined in Claim 5.

15. (Previously Presented) The product of Claim 9 which is obtained by air-pressure forming or vacuum forming.

16. (Previously Presented) The sheet according to Claim 5, wherein said elastomer is a styrene/butadiene block copolymer.

17. (Previously Presented) The sheet according to Claim 16, wherein a weight average molecular weight (Mw) of polystyrene portions of said block copolymer is within a range of from 45,000 to 75,000.
